

MOVE IT OR LOSE IT

How Move Management Impacts Business

Whether your company is growing rapidly, implementing alternative workspaces or reducing its real estate, office spaces are always changing. Save time and money by managing your moves, adds and changes with move management software.

Move management software brings assets, space and people together through cloud-based analytic technology.

Up-to-the-minute information allows you to make up-to-the-minute decisions that are accurate and easy.

Visual floor plans and spreadsheet-formatted views allow you to create multiple move scenarios by giving you a clear picture of your current space allocation - (used, unused, misused spaces).

Streamline workflows & provide transparency

HOW DOES MOVE MANAGEMENT IMPACT BUSINESS?

91%

of Millennials (those born between 1977-1997) stay at a job **less than 2.5 years**

Move management technology saves time and money with each hire and termination.

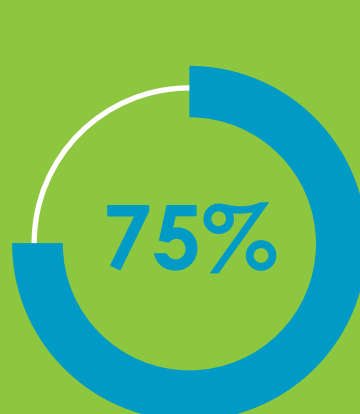

Your organization can **SAVE 2,145 HOURS** annually by automating move/add/change activities.

That's like spending **only 4 hours per hire or termination event**, compared to an average of 15 hours of manual work.

Average utilization rates for all types of organizations fall between **35-50%** throughout the workday, indicating **misused space**.

Automating move management helps **decrease time and labor** to manage office logistics for new hires and terminations by **75%**.

Imagine spending just **1 MINUTE PER FLOOR** every month to update vacancy ROI, as compared to 1 hour per floor without a non-automated system.

HOW DOES THE SOFTWARE WORK?

People

People records contain standard HR data. This data is assigned to spaces, providing up-to-date occupancy, vacancy and space allocation data.

Asset

Asset records contain general data such as serial numbers, purchase dates, operating status, etc. Assets can be assigned to people, spaces or other assets to ensure location accountability.

Space

Used with people and asset data, space records help reduce unused or misused space, track growth trends and identify consolidation scenarios.

Integrating people, assets and space data in one comprehensive solution, accessible on many devices.
